Number of participant responses in the last 2 weeks versus before that	4

Introduction

This report describes the frequencies of top census tracts visited by survey participants, venues of interest and those associated with collected census tracts, and the rate of participant survey collection over time.

This report was requested by NYC DoH to help guide the outreach campaign. If there are any concerns with the data being shared, please let us know.

The top visited census tracts are provided in the first table. The top visited census tracts are defined as those census tracts that were selected 5 or more times by the cohort. Additionally, latitude and longitude coordinates are provided where available.

Venues of interest are described by number of times visited in the following table. The table includes census tracts associated with each venue and the lat/lon coordinates associated with the venue, too.

Participant survey collection is plotted over time across the entire survey collection period (56 days) and also plotted across the last 2 weeks (which begins on the 46th day of data collection). A count of number of survey participants in the last 2 weeks and the time before that is provided in a table below.

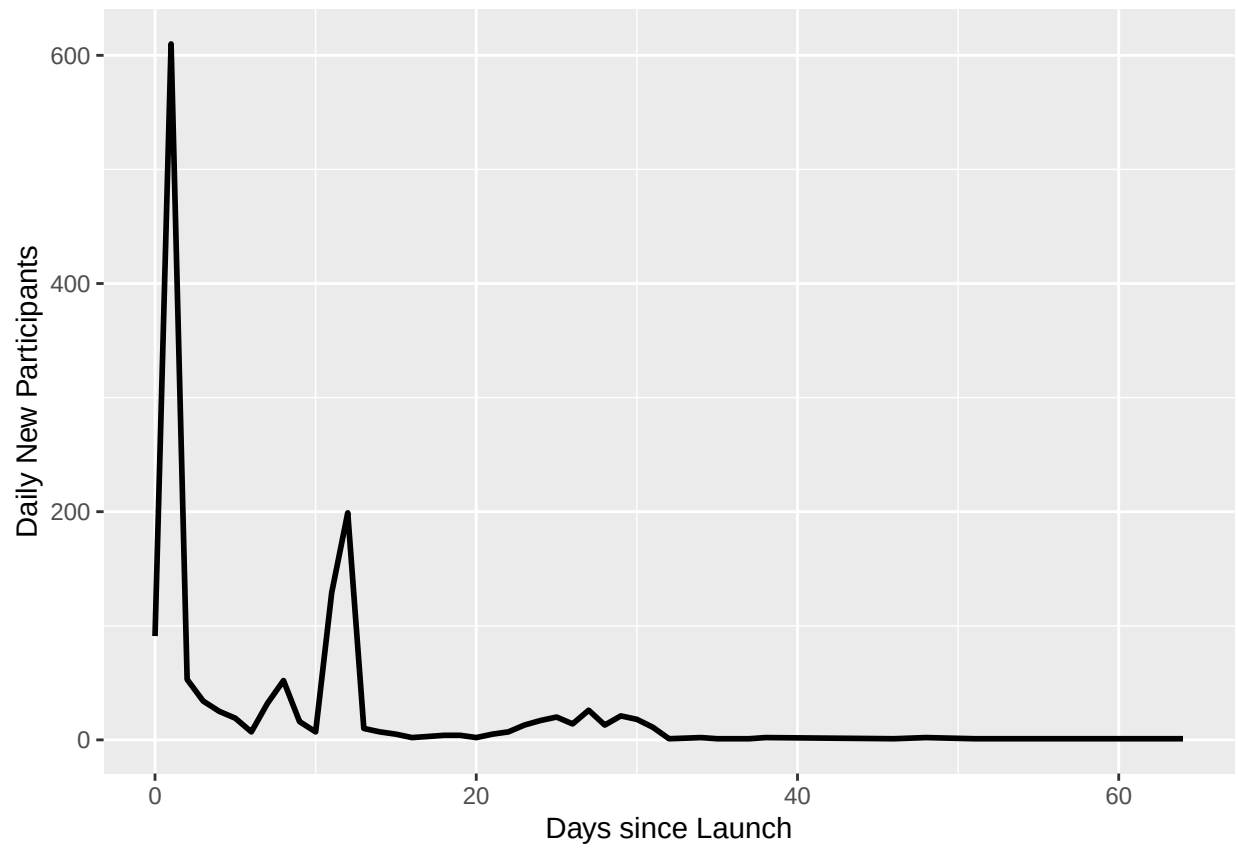

Table of top census tracts (≥ 5 times selected by participants in the survey)

	censusTractPlace	count	lat	lon
227	36061012700	53	40.76224	-73.98986

Daily new participants, all time

Daily new participants, within last 2 weeks

Number of participant responses in the last 2 weeks versus before that

within_two_weeks	count
Before the last 2 weeks	1486
Within the last 2 weeks	4

Given the very small number of participants collected ($n=6$), we are unable to draw conclusions about the changes in the past 2 weeks.
